Unity/C# developer with commercial experience as the sole developer of Growshi, a real-time multiplayer WebGL board game for 2–8 players. Built it end-to-end: gameplay systems, Photon PUN 2 networking with reconnect and state recovery, in-game economy, UI, and integration with a React website and ASP.NET Core API. Currently building Ascenday, a desktop productivity app in Unity. Looking for a Unity or C# role in Brno or remote.

EXPERIENCE

Unity Developer (freelance, sole developer) — Growshi Apr 2025 – Apr 2026

Commercial multiplayer WebGL board game for 2–8 players · growshigame.com.ua

- Built the core turn-based game loop: turn flow, dice roll, board/tile movement, game state.
- Implemented networking with Photon PUN 2: lobby, rooms, RPCs, room/player properties, host/client logic; integrated Photon Voice and Chat.
- Implemented reconnect with game-state hydration, so a player can rejoin a running match after a connection drop.
- Designed economy systems: player portfolio, cash flow, stocks, crypto, business assets, trading and shared investments.
- Built the game UI: lobby, market, trade, HUD, toast notifications, turn announcements.
- Integrated the Unity WebGL build into a React website with auth/license checks through an ASP.NET Core API.

Technical Support Operator — Kopiyka ISP, Lviv, Ukraine Nov 2024 – Apr 2025

Internet service provider

- Resolved “no internet” cases end-to-end by phone: line, optical terminal, router and device settings.
- Re-registered optical network terminals (ONT) and helped customers configure routers and Wi-Fi.

PROJECTS

Ascenday — desktop productivity app with RPG mechanics in development

Unity, C#

- Character progression, daily quests, achievements and statistics; local save system and modern UI.

Forest of Despair — horror game prototype

Unity, C# · github.com/1Padun/Forest_of_Despair

- Player movement, terrain, inventory, flashlight, monster state machine, post-processing.

Cuberacer — arcade runner

Unity, C# · 1padun.itch.io/cuberacer · github.com/1Padun/Cuberacer1

- Level progression and skin selection.

SKILLS

Unity & C#	C#, OOP, async/await, coroutines, events, ScriptableObjects, JSON/DTO
Multiplayer	Photon PUN 2, Photon Voice & Chat, RPC, state sync, host/client logic
UI	Unity UI, DOTween, LeanTween
Web/Backend	Unity WebGL, React integration, ASP.NET Core Web API (basic), SQL (basic)
Tools	Git, Photoshop, Aseprite

EDUCATION

Self-taught since 2021: Unity, C#, OOP, design patterns, multiplayer and game architecture
Zolochiv Vocational Lyceum, Ukraine

LANGUAGES

Ukrainian — native · Russian — C1 · English — B1 · Czech — A1
